

USE CASE 03

NEW HIRE
SET-UP AND
ONBOARDING:

Get your new talent empowered and equipped with all that is needed to get productive from day one

HUMAN RESOURCES

THE CHALLENGE

Once the new candidate has accepted the job offer, a new user account, an email address, and all the necessary IT equipment must be requested and ordered – not to mention access rights for applications, mailing lists, and systems. And all this has to happen in accordance with the new candidate’s profile, their preferences and – of course – the company rules. Very often, there are many parties and systems involved in this process that need to be orchestrated. Therefore, a 100% well equipped employee on day one is still considered an exception rather than a standard.

THE SOLUTION

Kryon RPA can be implemented to automatically trigger a predefined onboarding workflow once the user account is created. Business rules assigned to the user profile guide robots to make decisions, such as which system access permissions to grant. Robots can even send out predefined onboarding documents to the new joiners as a final step of the process.

Improve time to competence for your new hire by 50-70%, as it is ensured that they are equipped and empowered to get productive from day one.

Achieve streamlined, orchestrated, and efficient end-to-end processes, with 100% consistent data and a highly reduced error rate.

Create a professional first impression for the new hire, and generate positive feedback on online assessment platforms.
